# Predatar Enterprise

Enabling differentiated  
hybrid cloud data protection.

DELIVERING GLOBAL DATA PROTECTION

# Predatar Enterprise adds service management automation and orchestration to IBM's Spectrum Protect software.

**Predatar Enterprise enables differentiated hybrid cloud data protection, combining the flexibility of public cloud with the security of local control.**

**Management of backup and recovery is seldom fully integrated into enterprise organisations' core service management tools and processes, even though this routinely leads to unnecessary costs.**

**Predatar resolves this problem by automating data protection, monitoring system health and providing threshold-based alerts. Predatar supports many of the leading service management tools in use today.**

## Benefits

### INCREASE PRODUCTIVITY

- Reduces the risk of data loss by automating administrative tasks and providing clear visibility into the health of backup systems
- Cuts time spent writing management reports
- Allows management by exception meaning more time spent performance tuning and less time lost to incident resolution

### REDUCE COSTS

- Predatar maintains a historical record of backup performance and capacity metrics
- Architects can use this trend data to improve backup performance and optimise the use of expensive storage and software assets

### LEVERAGE THE ECONOMICS OF CLOUD

- Use Predatar to build "as a Service" style backup and disaster recovery capability for your customers
- Use the Predatar portal to tap into subject matter expertise from partners and cloud providers

## Features

### CONTROL

- Monitor the health of Spectrum Protect servers and clients
- Predatar records incident management patterns and automates actions including backup re runs, provisioning and fault diagnosis
- Support for global time zones allows administrative collaboration across multinational installations
- Backup professionals are given the means to segment capacity and performance data by Spectrum Protect server groups, node groups, chargeback groups or backup service catalogues

### CLOUD

- A connected Consumer portal provides a clear window into the performance and costs of the backup system for users and stakeholders
- Informed by metadata stored in Spectrum Protect, Predatar uses the public application interfaces (APIs) of cloud providers to rapidly provision servers and automate recovery
- Build your own custom portal by accessing Predatar's APIs

## Options

### Predatar Lite

- Low cost annual subscription to the Analytics module only
- Installed in minutes, provides instant insight into Spectrum Protect
- Technical analysis for improved decision making and troubleshooting
- Used by Spectrum Protect architects

### Predatar

- Annual subscription to all features of Predatar including the Consumer Portal
- Essential for delivery of private cloud backup services
- Used by support service personnel, architects, compliance managers, application owners and business line managers
- Event monitoring and alerting
- Third party integration
