#### Description

##### Symptoms:

How do I exclude an object or sub-directory of IFS Replication?

##### Environment:

##### Actions Taken:

#### Answer

On Primary Machine:

1. 5.2 IFS Replication
2. Find the object or directory you want to exclude.
3. Use the Option 10 Quick end (7,8,9)
  - o The secret is that on this screen the status says "**Inactive**"
4. Run the command: CALL PGM(E2CVTIFS)
  - o You can submit a job with this command
5. Run the command: WRKDGIFSE
  - o Check from this screen that an entry (or entries) with the "Process Type" **\*EXCLD** exist for the object or directory was excluded.
